

Personal Security and Identity Theft Expert Touts GPS as Major Piece of the Laptop Security Puzzle

(BOSTON, Mass. - Oct. 23, 2006 - IDTheftSecurity.com) The past year has witnessed at least five major security breaches involving laptop computers, putting millions of consumers' identities at risk of theft. Robert Siciliano, a personal security and identity theft expert, encouraged organizations to stave off further portable computer thefts and losses by considering GPS tracking technology for their fleets of laptops. He pointed to MyLaptopGPS, an Oklahoma-based company that provides GPS tracking as a service.

"GPS is the simplest solution for organizations trying to address their laptop computer security concerns," said Siciliano, president of IDTheftSecurity.com. "These machines are easy to steal and can go missing anywhere. If the technology is affordable, like MyLaptopGPS', organizations are remiss not to install it on their entire laptop fleets."

Siciliano provides consumer education solutions to Fortune 500 companies and their clients. The Privacy Learning Institute recently featured him on its Web site. This year, Siciliano has discussed identity theft on CNBC's "On the Money" multiple times, on NBC's "Today Show," and on FOX News. He is author of "The Safety Minute: 01."

MyLaptopGPS uses proprietary Internet-based GPS, an affordable technology that makes the company's product of the same name easy-to-use and preferable to offerings from other GPS providers. MyLaptopGPS™ also installs software that encrypts and silently removes the important files from them—returning these electronic documents to the rightful user while placing them out of a criminal's reach.

"MyLaptopGPS allows responsible and conscientious companies to track stolen laptops," said Dan Yost, chief technology officer at MyLaptopGPS (www.MyLaptopGPS.com). "But much more importantly, it allows the rightful owners to 'push the big red button' and delete sensitive data from the stolen machine right under the thief's nose, simultaneously transferring it back to a secure location. That is by far the most important consideration."

This year's spate of government data breaches recently prompted the House Government Reform Committee to investigate. As reported by *CNET News*, the committee found each of the government's 19 agencies reporting to have experienced at least one loss of data since 2003.

Meanwhile, earlier this month the Department of Homeland Security released a report that found laptop computers in many ways unsecured at its own Inspector General's Office. DHS's findings followed last month's incident involving a stolen General Electric Co. laptop computer. GE's mishap was the latest in a string of far-reaching, highly publicized losses and outright thefts of thousands of laptops this past year at the Commerce Department, the Veterans Affairs Department, Hotels.com, and Equifax Inc.

"Laptops have always been a target of thieves due to their ease of procurement and resale value," Siciliano concluded. "In the past an organization would fret over the monetary loss of the machine. Today, the laptop's value is equal to the cost of a press release announcing both the theft of the machine's data and the company's spending of hundreds and thousands, if not millions, of dollars to protect consumers from the theft."
